

1. PROJECT OVERVIEW

The objective of this assessment is to evaluate your skills in full stack web development, AI integration, database design, API development, and problem-solving. You are required to build a complete **AI-powered web application** with modern UI/UX, secure authentication, and robust backend functionality.

2. TASK DESCRIPTION

You are required to build an AI SaaS Platform with the following modules:

- 1. LANDING PAGE**
Create a modern, responsive landing page with sections: Hero, Features, How It Works, Pricing, Testimonials, FAQ, and Contact.
- 2. AUTHENTICATION**
Implement user authentication including Register, Login, and Forgot Password. Use proper validation and secure practices.
- 3. DASHBOARD**
After login, users should see a dashboard with sidebar navigation, statistics cards, recent activity, profile, and settings.
- 4. AI CHAT ASSISTANT**
Integrate an AI model (OpenAI / Gemini / Groq) to build a chat interface. Features: chat history, Markdown support, copy, stop generation, and regenerate response.
- 5. PROMPT LIBRARY**
Create a prompt library with categories (Marketing, Coding, SEO, Content Writing, Business, etc.). Include search and filter functionality.
- 6. DATABASE**
Design and implement database to store users, chats, messages, and saved prompts.
- 7. REST API**
Develop RESTful APIs for Authentication, Chat, Prompt CRUD, and User Profile.
- 8. SECURITY**
Implement JWT authentication, password hashing, rate limiting, and input validation.
- 9. DEPLOYMENT READY**
Prepare the project for deployment with environment variables, proper folder structure, and documentation.

6. SUBMISSION GUIDELINES

- Upload your code to a public or private GitHub repository.
- Provide a **README.md** with setup and run instructions.
- Record a short (5–10 min) demo video showing the features.

7. DELIVERABLES

- Source Code (GitHub Link)
- README.md
- Database Schema (ER Diagram or SQL)
- Demo Video Link

3. GENERAL INSTRUCTIONS

- Time Limit: 3 – 4 Hours
- You may use any libraries, frameworks, or tools you are comfortable with.
- Use clean code and best practices.
- Responsive design is mandatory.
- Focus on functionality, UI/UX, and code quality.
- You may use AI tools for assistance, but final code must be your own.
- Submit the complete source code with setup instructions.

4. TECH STACK (RECOMMENDED)

- Frontend**
 - React.js / Next.js
 - Tailwind CSS
 - TypeScript (Preferred)
- Backend**
 - Node.js
 - Express.js
- Database**
 - PostgreSQL / MongoDB
- AI Integration**
 - OpenAI API / Gemini API / Groq API
- Other Tools**
 - Git & GitHub
 - Postman / Thunder Client
 - Vercel / Render / Railway (Deployment)

5. EVALUATION CRITERIA (100 MARKS)

UI/UX Design	20
Responsive Design	10
Code Quality & Best Practices	15
AI Integration	20
Backend APIs	15
Database Design	10
Security Implementation	5
Git Commit History	5
TOTAL	100
